TECTONOPHYSICS—Volume 247—Nos. 1–4

Special Issue

30 YEARS OF TECTONOPHYSICS

A SPECIAL VOLUME IN HONOUR OF GERHARD OERTEL

A collection of invited papers

Edited by

TERRY ENGELDER

Penn State University, University Park, PA, USA

CONTENTS

Introduction vii
A flow law for dislocation creep of quartz aggregates determined with the molten salt cell
G.C. Gleason and J. Tullis 1
Nearfield vertical displacement in the creeping segment of the San Andreas fault, central California, 1975 to 1994
A.G. Sylvester 25
Finite-element analysis of the stress distribution around a pressurized crack in a layered elastic medium: implications for the spacing of fluid-driven joints in bedded sedimentary rock
M.P. Fischer, M.R. Gross, T. Engelder and R.J. Greenfield 49
Three-dimensional folding and necking of a power-law layer: are folds cylindrical, and, if so, do we understand why?
R.C. Fletcher 65
Kinematic model of detachment folding including limb rotation, fixed hinges and layer-parallel strain
J.-L. Epard and R.H. Groshong Jr. 85
Primary and tectonic fabric intensities in mudrocks
S.R. Paterson, H. Yu and G. Oertel 105
Correlation between magnetic anisotropy and fabric for Devonian shales on the Appalachian Plateau
A.M. Hirt, K.F. Evans and T. Engelder 121
Strain analysis of the Ninemile fault zone, western Montana: insights into multiply deformed regions
A. Yin and G. Oertel 133
Drag along faults
Z. Reches and A. Eidelman 145
Shear zones and rock history
W.D. Means 157
Orientations of faults determined by premonitory shear zones
A.M. Johnson 161
Frictional rheology: hardening by rotation of active normal faults
A. Agnon and Z. Reches 239
